Reporte de resultados obtenidos

En el presente documento se muestran los resultados de la ejecución de los algoritmos. Las tablas 1, 2 y 3 corresponden con los algoritmos de programación dinámica, greedy y greedy proporcional respectivamente. En cada casilla se muestra el tiempo de ejecución promedio de 10 escenarios. La cantidad de objetos se muestra en la primera fila y la capacidad de la mochila se muestra en la primera columna. Las tablas muestran los resultados en microsegundos (10^{-6} segundos). En las tablas 4 y 5 se muestra el porcentaje de veces que los algoritmos greedy tuvieron un resultado que coincide con la solución óptima en cada uno de los escenarios.
